ENGINEERING & PROCESS SUPPORT

The Second Pair of Eyes.

Most Engineering Problems Are Not Technical Failures.

They are decisions made too early, with too little information.

The companies that reach us aren't failing. They're facing a decision about a process, a piece of equipment, a supplier, or a system. They want to think it through properly before the commitment is made.

That's where we come in.

OUR APPROACH

Clear Engineering Direction, at the Point Where It Matters Most.

We have no equipment to sell. No supplier to protect. No catalogue to push. Our job is to give you a clear picture of what's happening, what needs to change, and what the best options look like.

Three packages. Each one covers a different stage. You can start wherever your situation demands. You can take one or all three.

WHAT YOU GAIN

Clear, defensible engineering decisions with documented reasoning

Reduced risk in process and equipment investments

Access to high-quality Türkiye-based supplier options alongside UK and European vendors

Better alignment between suppliers and site teams, across language and geography

PACKAGES AT A GLANCE

Three Packages. Start Where Your Situation Demands.

01 Process Assessment & Needs Discovery

Understand the real problem before you commit to a solution.

A clear, independent picture of what is happening in your process. What needs to change, and in what order.

03 Installation, Commissioning & Maintenance Support

From delivery to reliable operation, without the gaps.

On-site support through installation, commissioning, and early operation. Making sure what was designed actually performs in the real environment.

02 Process Design, Equipment Specification & Vendor Sourcing

The right process. The right equipment. A vendor choice you can defend.

Preliminary workflow and layout concepts. Equipment specification. Vendor identification and comparison across the UK, Europe, and Turkiye.

PACKAGE 01 - PROCESS ASSESSMENT & NEEDS DISCOVERY

Understand the Real Problem Before You Commit to a Solution.

WHAT WE DO

Review existing processes, workflows, and operational practices on site or from documentation

Identify inefficiencies, bottlenecks, and technical risks, including those not immediately visible

Assess operational and maintenance challenges from a hands-on engineering perspective, including OPEX and CAPEX evaluation

Define clear engineering needs and priorities, ranked by impact and urgency

01

OUTCOME

A clear technical baseline of what is actually happening in your process. What specifically needs to change, a prioritised list of next steps, and no generic reports.

If your assessment is done and you're ready to design and specify, Package 2 picks up from there.

PACKAGE 02 - PROCESS DESIGN, EQUIPMENT SPECIFICATION & VENDOR SOURCING

The Right Process. The Right Equipment. A Vendor Choice You Can Defend.

WHAT WE DO

Develop preliminary workflow and layout concepts based on fundamental principles, not from a specific supplier's catalogue

Define equipment requirements and technical specifications in detail

Identify and assess suitable vendors across the UK, Europe, and Türkiye

Compare suppliers technically and commercially, on equal terms, with documented reasoning

02

OUTCOME

A clear process, specific equipment, and a vendor choice you can defend. Built on genuine comparison, not familiarity.

If you've specified and sourced, and now need support through installation and commissioning, Package 3 picks up from there.

PACKAGE 03 - INSTALLATION, COMMISSIONING & MAINTENANCE SUPPORT

From Delivery to Reliable Operation, Without the Gaps.

WHAT WE DO

Support installation planning and site coordination before equipment arrives, not after

Attend and support Factory Acceptance Testing (FAT) at the supplier's facility

Assist Site Acceptance Testing (SAT) and system start-up activities on site

Identify and resolve integration issues between equipment, systems, and site conditions

Coordinate maintenance planning and after-sales support with suppliers

03

OUTCOME

Smoother installation, faster commissioning, and fewer surprises. Your site team understands what they've got and how to run it.

WHO THIS IS FOR

Recognise Your Situation.

IF THIS SOUNDS FAMILIAR

START WITH

A process that's underperforming but you're not sure why

01 Process Assessment

A new investment to plan: equipment, layout, or suppliers

02 Design, Specification & Sourcing

A system that's installed but not working as expected

03 Commissioning & On-Site Support

A supplier in Turkiye or Europe you need to evaluate or manage

02 or 03 Depending on stage

An engineering decision that needs a second perspective before you commit

01 or 02 We can help you find the right starting point

HOW WE WORK

From First Conversation to Confident Decision.

STEP 01

Listen

We start with your situation. What's happening? What have you tried? What decision is in front of you?

STEP 02

Assess

We look at the process, the equipment, or the supplier landscape. We build a clear, independent picture of where things stand.

STEP 03

Specify and Source

We design the right solution, define the right equipment, and find the right vendors. Across the UK, Europe, and Turkiye.

STEP 04

Support On Site

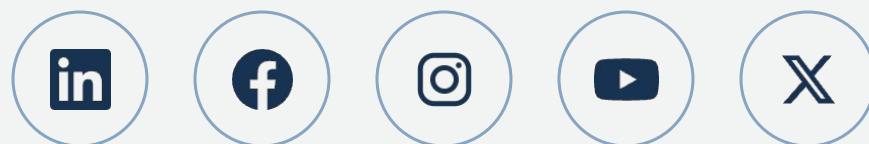

We stay through installation and commissioning. We make sure what was designed works in the real environment.

See If We're a Good Fit.
